

John Doe: Example Deer Survey

December 23, 2024

PROPERTY DETAILS

Dubois, PA: ~120 acres
Owner: John Does & Bucks
Elevation: 1370' – 1640'

PROPERTY DESCRIPTION

The property is key shaped and includes large portion of the flood plain of the Sandy Lick Creek. Areas along and adjacent to the creek are dominated by shrubs and heavy brush transitioning into mature timber as the elevation increases along the southeastern portion of the property. The forested areas are primarily deciduous tree cover with a few isolated pockets of conifer (Hemlock). Much of the upland hillside was recently timbered and still has several downed trees and relatively recent skid trails. The property is loosely bisected by Rosebud Rd. a private (gated) access running east/west. Elevations range from a low of 1370' along the creek to a high of 1640' at the SW corner of the property.

SURVEY SUMMARY

of Observations: 17
Total Deer: 28
Avg. Group Size: 1.6
Sex Ratio: 1:3 (Buck:Doe)
Deer Density: 0.24 deer/acre (149 deer/sq mi)

COMMENTS

Overall, there was a huge number of deer on this property. Likely due to quality early successional habitat. Buck maturity was skewed toward younger individuals, but this was likely due to the timing of the survey, and we suspect there are older/more mature bucks on neighboring properties. Never-the-less we did observe one buck with >8 points.

WEATHER

Visibility: 5-8 mi
Clouds: 100% overcast
Wind: 13-15 mph
Temp: 22 F
Snow: ~4-6"

FLIGHT DETAILS

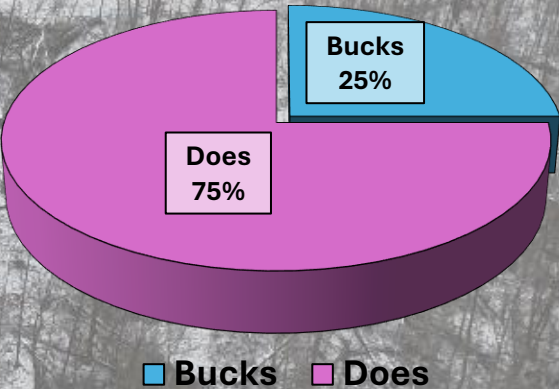

Miles: 30.1 mi
Flights: 8
Avg. Speed: 13.6 mph

OVERALL
